

MAIN LINE WATER VALVE TAG

The tag below can be used to mark your main line water valve. Your main-line water valve is normally located where the water line enters your home through the foundation. You can use it to shut off the water in an emergency or when you are making plumbing improvements. To make sure this valve works properly, turn it off and verify that the water flow to your fixtures has stopped completely. When the valve is turned back on, it should be opened fully to allow unrestricted water flow. Be sure to show everyone in your home where the valve is and how to turn it off.

To use the tag, print this page on an 8.5 by 11 sheet of paper, preferably on card stock or other heavy weight paper. Cut down the line at the top and around the circle so the tag fits around the valve.

**MAIN LINE
WATER VALVE**

This valve controls the flow of water through your plumbing. It can be used to shut the water off in emergencies or when plumbing improvements are being made.

To make sure this valve works properly, turn it off and verify that the water flow to your fixtures has stopped completely. When the valve is turned back on, it should be opened fully to allow unrestricted water flow.
